Writing Model Problem-Solution Essay

Prompt: Write an essay in which you explain a problem and propose one or more solutions.

Problem → 1. In my community, we have a problem with

Problem Detail → people not tying their garbage bags properly. Then animals get in to open bags and spread the garbage around. Spilled garbage is smelly, and it makes the neighborhood look awful. One solution is to educate the community. For example, the town can run an ad campaign, or the newspaper can print editorials.

Solutions → Another solution might be to have an event called Safe Garbage Day. Officials can hand out free garbage bags. They can also print out instructions on How to Bag. Maybe the garbage problem will disappear.

Solution Detail →

Problem → 2. A problem in my community is that there are too many stray cats. They make a lot of noise, waking people up at night. They also attack birds.

Problem Detail → One solution might be to get help from the local animal shelter. They can round up stray cats and give them shots and a health checkup. Another solution

Solutions → might be to have the strays become pets. We can have an Adoption Fair and place ads in the newspaper. Cats will have happier lives if they are healthy and loved.

Solution Detail →

Vector Mechanics for Engineers: Statics

Resultant of Two Forces

- Force: action of one body on another; characterized by its point of application, magnitude, line of action, and sense.
- Experimental evidence shows that the combined effect of two forces may be represented by a single resultant force.
- The resultant is equivalent to the diagonal of a parallelogram which contains the two forces in adjacent legs.
- Force is a vector quantity.

Skewness example problems with solutions pdf. Why is negative skewness bad. Skewness example problems with solutions. Is negative skewness good. Why is skewness bad. What is positive skewness and negative skewness.

Skewness Skewness shows two additional features of a data set apart from a central location (mean) and dispersion. To understand the inherent nature of a given dataset we have to measure and know these four basic features the average, variance, skewness. Skewness means the symmetry or the lack of symmetry of a data. Skewness can be easily observed from the frequency curve. In frequency curve of the data and draw a reference line at the value of mode then if we find the curve on either side of the line have equal, that data is called symmetric. Positive Skewness: Skewness is said to be positive when the tail of the curve of the frequency distribution elongates more on the right. Also, skewness is positive if mean, median and mode of the frequency distribution satisfy the following condition: Mean>Median>mode Negative Skewness: Skewness is said to be negative when the tail of the curve of the frequency distribution elongates more on the left. Also, skewness is negative if mean, median and mode of the frequency distribution satisfy the condition Mean
